

CartCompass MVP Build Prompt v1

Project Overview

Build a mobile-first web application called CartCompass.

CartCompass helps shoppers compare the total cost of their shopping basket across grocery stores and recommends the cheapest store for their entire shopping trip.

The application is basket-first, not product-first.

Primary goal:

"Help users determine which store is cheapest for their weekly shopping basket."

Initial launch market:

- Phoenix, Arizona
- Walmart
- Fry's

Initial product catalog:

- Approximately 30 products
- Grocery and household essentials

Data source:

- Spreadsheet-based product and price data
- Spreadsheet will later be imported into a database

Core User Flow

1. User opens CartCompass.
 2. User adds products to a shopping basket.
 3. User adjusts quantities.
 4. User clicks Compare Stores.
 5. Application calculates basket totals for each store.
 6. Application recommends the cheapest store.
 7. Application displays savings amount and savings breakdown.
-

MVP Features

Home Screen

Display:

- CartCompass logo/text
- Subtitle: "Compare your shopping trip and save money."
- Basket summary card
- Add Item button
- Category browsing section
- Product search bar

Categories:

- Dairy
- Produce
- Meat
- Pantry
- Beverages
- Household
- Personal Care

Do not display prices on the Home Screen.

Product Selection Screen

Display:

- Search bar
- Product list
- Category filters

Each product should contain:

- Product name
- Category
- Add button

Example:

Milk

Category: Dairy

[Add]

When Add is pressed, product is added to basket.

Basket Screen

Display:

- Current basket items
- Quantity controls
- Remove item functionality

Example:

Milk

[-] 1 [+]

Eggs

[-] 1 [+]

Bread

[-] 1 [+]

Chicken Breast

[-] 2 [+]

Display item count.

Display large button:

Compare X Items

Do not display store pricing yet.

Results Screen

After Compare Stores is clicked:

Calculate basket totals for all stores.

Example:

Walmart: \$42.17

Fry's: \$48.00

Display winner card:

🏆 Best Store This Week

Walmart

Basket Total: \$42.17

You Save: \$5.83

Display store comparison table.

Display savings breakdown by item.

Example:

Milk: \$0.40

Eggs: \$1.25

Chicken Breast: \$2.10

Detergent: \$1.08

Total Savings: \$5.83

Business Rules

MVP only supports:

- Walmart
- Fry's

Recommend ONE store only.

Do not split shopping trips between multiple stores.

No accounts.

No user login.

No coupons.

No loyalty programs.

No receipt uploads.

No AI recommendations.

No notifications.

No price history.

Focus exclusively on basket comparison.

Data Model

Products

- ProductID
- ProductName
- Category
- Brand
- PackageSize
- UnitType
- BaseUnit

Stores

- StoreID
- StoreName

Prices

- ProductID
 - StoreID
 - Price
 - UnitPrice
 - LastUpdated
-

Comparison Logic

For each basket item:

1. Find product price for Walmart.
2. Find product price for Fry's.
3. Multiply by quantity.
4. Sum basket totals.

Example:

Milk x1

Eggs x1

Bread x1

Chicken x2

Calculate:

Walmart Total

Fry's Total

Winner = lowest total.

Savings = difference between lowest total and second-lowest total.

Design Requirements

Mobile-first.

Clean design.

Simple interface.

Primary color:

Green (#1F7A4C)

Secondary color:

Dark Navy (#1E293B)

Background:

Light Gray (#F8FAFC)

Large touch-friendly buttons.

Minimal clutter.

Focus on savings and basket comparison.

MVP Success Criteria

A user can:

1. Add products to a basket.
2. Change quantities.
3. Compare stores.
4. See the cheapest store.
5. See total savings.

If those five actions work, MVP is considered successful.
